

Jumbo Tumbling Tower Blocks Game

SET UP:

Find a flat surface, with plenty of space around for when the blocks come tumbling down.

Stack layers of 3 aligned blocks alternating as you go up (each level should be at a right angle to the previous one), you should have 18 rows to start.

GAME PLAY:

1. Using one hand, slide blocks out of the tower one at a time from any level below the highest completed level.
2. Place this piece on the top of the tower to create the next level.
3. A player's turn ends when the next player touches the tower, or 10 seconds after they last touch the tower.
4. Continue until the tower comes tumbling down.

KEEPING SCORE:

5. The last player to successfully add a piece to the tower before it was knocked over is the winner.
6. The player who knocked the tower over, sets up for the next game and starts the next round.
